

(a) Published experiment and TPA model
(Vasconcelos and Wright, 2011, Fig. 10)

(b) Present model on the same five axes (no time shift)

Our model in the paper Fig.10 axes -- $Dt^* = 0.607$, $Ha_0 = 0.305 \text{ m}$, $WL = 0.254 \text{ m}$
(compare with the paper's Fig.10 scan: experiment 3 runs + their TPA model)
