

Cong, Chan & Lee (2017) signature runs reproduced with our decoupled two-fluid model

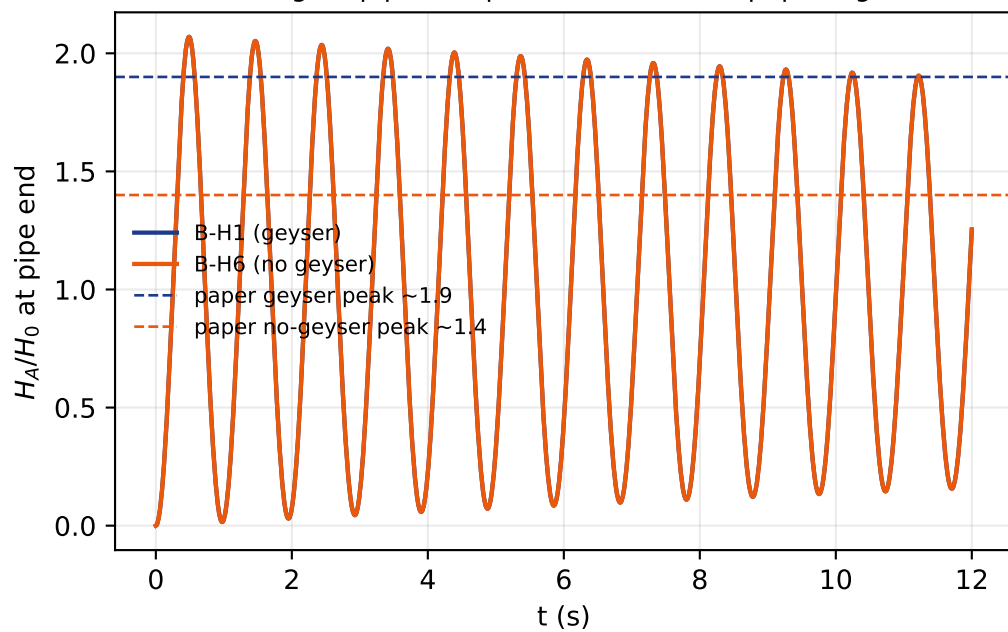

(a) Run B-H1: $D_r=16$ mm, $V_{air}^*=9.0 \Rightarrow$ GEYSER

(b) Run B-H6: $D_r=41$ mm, $V_{air}^*=1.4 \Rightarrow$ no geyser

(c) Stage-1 pipe-end pressure transient (paper Fig.10)

(d) B-H1: pocket pressure $\gg$ hydrostatic (drives geyser)
